

Slips, Trips, Missteps, and Their Consequences, 2007, 375 pages, H. Harvey Cohen, Jon R. Abele, 1933264012, 9781933264011, Lawyers & Judges Publishing Company, 2007

Falls are the second leading cause of accidental deaths in the United States, but are overlooked in most literature. Of use to primary care physicians, nurses, insurance adjusters, architects, writers of building codes, attorneys, or anyone who cares for the elderly, this book will tell you how, why, and when people will likely fall, what most likely will be injured, and how such injuries come about. Use this book to answer your questions on how to determine fault and liability between the plaintiff and the defendant in a slip and fall case, applying the traditional premises liability model. The included case studies and examples will help you understand the mechanics and causes of these accidents. The book includes a chapter on osteoporosis and other biomedical factors that cause falls. With the very useful Fall Prevention Manual that is included, you will find potential trouble areas around a building before an accident occurs. Falls and Related Injuries is peerless in its handling of an important and overlooked subject.
